

ABSTRACT OF THE DISCLOSURE

A self-contained device which can be utilized by the general population to analyze genetic materials or samples. The device incorporates apparatus for removing a biological sample, apparatus for analyzing the genetic make-up of the biological sample, computer and database for correlating the genetic make-up analysis with a specific physical condition or malady, and a device for reporting the specific condition information. The device can also incorporate automatic apparatus to remove and store biologically hazardous materials which may be created by handling of the genetic material and device components contaminated by the materials.
